

PROJECT PROFILE

KAISER PERMANENTE

Installed Product :

MES100 Moisture Vapor Control System

Site Conditions :

When the New Santa Clara Kaiser Permanente Building was proposed for construction, Floor Seal Technology, Inc. was there from the start.

Every hallway, and patient care room required moisture control systems to reduce vapor emission levels. Floor Seal Technology, Inc.'s MES100™ vapor emission control system was applied to ensure that the resilient flooring would not fail.

Years later, zero failures!
