

PROJECTPROFILE

STANFORD

Stanford University Medical Center

Installed Product :

MES100 Moisture Vapor Control System

Site Conditions :

One of the most advanced healthcare facilities in the world, Stanford University Medical Center, entrusted their floors to Floor Seal Technology, Inc. With groundbreaking research and treatment occurring every day, this hospital cannot afford any downtime, especially from their floors.

During the construction of the Ambulatory Surgery Center at Stanford, it was learned that their above-grade concrete slabs were emitting excessive moisture vapor. Floor seal was contracted to seal the slabs with our MES100™. The resulting success of the floors has allowed Stanford University Medical Center to continue to provide its renowned healthcare services.
