

PROJECT PROFILE

YAHOO!

Installed Product :

VaporSeal309™ Moisture Vapor Control System

Site Conditions :

The new Yahoo! Server Farm in Quincy, Washington needed a quick moisture vapor emission solution for their construction. Floor Seal Technology, Inc. was called in to prevent their floors from falling victim to moisture vapor emission.

To ensure a successful flooring installation, Floor Seal Technology, Inc. installed VaporSeal309™ Vapor Emission & Alkalinity Control System. A spray down system that is installed immediately after placement of the slab.

VaporSeal309™ controlled the vapor and alkalinity with a lower overall cost and a time savings over traditional remedial systems!
