**RE: Valley Health Center Milpitas**

Dear Bonnie:

Thank you for your effort and thorough involvement on the concrete curing and moisture emission control work for the Valley Health Center Milpitas project. I am convinced the expertise of your onsite personnel and the effectiveness of the VaporSeal 309 system were instrumental in reducing the time and cost we originally budgeted for moisture emission control and floor preparation work.

Given their fast-track construction, the extremely moisture-sensitive resilient flooring specified, and the mission-critical nature of healthcare facilities, I have become accustomed to applying remedial moisture control products throughout a facility. Because of your firm's early input and quality assurances we were able to mitigate several of the factors that may have led to more severe moisture emission levels. The few areas on the ground floor that required further remediation were done superbly and with minimal interruption.

Please pass along my gratitude to the rest of your team that helped make this project a success.

Best Regards,
